

Jamie Koehler

Senior Research Scientist

Cargill

Jamie Koehler has a B.S. in Biology and a B.S. in Chemistry with a biotechnology emphasis from the University of Wisconsin River Falls. While she has worn many hats at Cargill spanning process engineering, application problem solving and analytical chemistry, she is currently the Proteomics SME and the Proteomics Capability lead at Cargill's Core R&D. Based in Minneapolis, Minnesota, she enjoys many outdoor activities across all four seasons from kayaking to downhill and cross-country skiing, when she isn't inside cooking, knitting or crocheting. To quote Bill Nye "Science Rules!", and Jamie is grateful to head to the lab each day driven by the joy of scientific discovery.
