

Lindsay K Pino, PhD

postdoctoral researcher, University of Pennsylvania; co-founder, Talus Bioscience Inc

Lindsay has over a decade of experience in developing mass spectrometry proteomics methods for studying human disease. She has trained the Broad Institute, the University of Washington, and most recently the University of Pennsylvania. Her focus is on developing techniques for quantitative proteomics and she is particularly interested in the challenges associated with scaling-up quantitative proteomics experiments. Lately, she has been working on expanding these techniques to target dynamic systems including protein turnover, epigenetics, and protein interactions.
